One of the main innovations on board SD118 is the stern area that, once at anchor, transforms itself into a kind of island creating a beach of almost 20 sqm walkable space, thanks to the side terraces that open to enjoy the sun at the water's edge. The beach is equipped with a platform with a lift system to bring guests closer to the sea. A solution that expands space and comfort compared to previous models of the SD line.

The outdoor spaces evolve at every level: the unique configuration of SD118 proposes a large outdoor living area at the bow, spread over two interconnected decks, to which the owner has direct access from the large full-beam cabin, through a sliding companionway, hidden under the staircase that connects the two decks, to ensure total privacy.

The asymmetry represents the core of the innovation of the new model of the semi-displacement line: extended on the upper deck, it allows a direct view of the sea from both sides, generating a perfect connection between the interior and the exterior. While the port side features a walkway that leads seamlessly from stern to bow, along which the bulwark at the salon opens to form a terrace, the starboard side, on the other hand, is like that of a wide body hull.

The innovative layout has allowed the realisation of a boat with a tonnage of 290 GT, important volumes for a yacht of this size.
